My path in to the web World started from a school (Old-school needs to remember Evgeniy Popov html/css lessons lol).
Next in University I was fan of Ruby language, when Ruby separated numbers with the Fixnum and Bignum classes and when Roman Snitko (the best developer in the world) was the only promoter of this language for free.
I'm also interested in blockchain and was a hater of PHP, jQuery, Bootstrap and bad website designs.
So, I'm successfully finished Software Engineer faculty in this sucks University (In this time I began translating a book "Little book of Ruby" that Lambda Books later took away), had a break because serve in the armed forces of Ukraine about 1.5 year and after - goes back to development world with "Seedx" company.
I want to learn best practices from experienced Ruby developers and work together with developers which are not too old, share modern trends and did not have time to become strong bores

Skills
JavaScript: Native JavaScript, Stimulusjs
Ruby: Native Ruby code. Rails & Hotwire

Unix
Was migrate from Fedora to Ubuntu. Also seems like can write something with Bash lang ha-ha

Databases:
I'm started my Rails experience from Postgresql and still using it.

Layout
- HTML (migrate from .haml to .erb), native CSS. I like "Css Grid Layout"

Experience
- One year with Seedx Inc.

Books
All Ruby books are great, but I still recommend you read the book of Michael J. Fitzgerald: Learn Ruby

Education
- Yuriy Fedkovych Chernivtsi National University (2014 - 2018)
- Ruby Boot Camp in COAX Software (in 2018)
